Landowner has a valid Environmental Farm Plan (yes/no)? _____

If yes please state expiry date: _____

Draw dam location, inlet and outlet, surrounding vegetation and current land use. Diagram is of a whole section.
Or attach an image of the project to application form.

***Cost:** Landowner contribution is 25% of the total project cost.

* The application must include a sketch of the proposed project and completion of the following questions:

1. Purpose(s) of the dam? _____
2. Present land use? _____
3. What size would the storage reservoir be (acres)? _____
4. How deep would the water reservoir be when full? _____
5. Will there be any affect on upstream or downstream landowners? Please explain. _____

The Board will determine approval/non-approval and priorities of all applications. Board's decision is final.

Signature of Landowner

Date

PURPOSE:

The purpose of the program is to encourage water conservation. The Board will consider projects with multiple benefits as opposed to dams with a single purpose such as watering for livestock. The decision of the Board regarding project approval is final.

COST-SHARING:

The landowner will contribute 25% of the total costs and the Board will contribute 75% of the total cost.

PROCEDURE:

1. Landowners requesting a water storage project will complete the Water Storage Application Form.
2. The completed application form is submitted to the District who may request a survey, design or cost estimate.
3. Applications are brought to Sub-district meetings for approval/non-approval.
4. Once an application is approved, the landowner will be asked to complete a Water Storage Agreement. The agreement will then be registered with the Land Titles Office in order to protect the Board's investment in the dam.

Note: Photos taken on site may be used by the District for public relations purposes.
